Amarinth delivers API 610 VS4 pumps to Garraf Oil Field Development, Iraq

November 13, 2020
 by oilandgaspress

The \$650,000 order of four API 610 VS4 vertical pumps with Plan 53B seal support systems was placed with Amarith by China Petroleum Engineering Procurement & Construction (CPECC). This was the first time that CPECC had ordered from Amarith and the decision was made based on Amarith's proven ability to design and deliver bespoke API 610 pumps for hazardous areas, along with the company's previous experience of successfully supplying pumps for the Iraq market, all to strict deadlines.

The pumps were manufactured in Inconel Alloy 625, a nickel-based superalloy that possesses high strength properties, resistance to elevated temperatures and excellent protection against corrosion and oxidation. In addition, the Plan 53B seal support systems required a bespoke mounting configuration and piping design.

Amarinth successfully completed the design, manufacture, and delivery within the required 34 weeks. **Oliver Briggshaw**, **Managing Director of Amarith**, commented: "We are delighted with this first order from CPECC, again underlining our strength in the Middle East, and in particular our ability to delivery API 610 pumps into the developing oil and gas projects in Iraq."
