Amarinth, a leading company specialising in the design, application and manufacture of centrifugal pumps and associated equipment to the oil and gas, petrochemical, LNG, chemical, industrial, power and desalination markets, has signed a strategic partnership with RentCo Africa Ltd under which the two companies will co-operate on strategic projects in the African territory to provide and finance centrifugal pumps and associated equipment on attractive financing terms.

RentCo Africa, an independent leasing company with headquarters in Nairobi, Kenya, provides structured financing solutions through operating leasing and working capital solutions to both the private and public sectors in Africa. The strategic partnership between Amarith and RentCo will enable organisations making investments in pumping equipment to flexibly finance Amarith's world-renowned and proven horizontal, vertical, and inline vertical centrifugal pumps and associated equipment. In particular, those organisations that have capital constraints and are seeking to avoid upfront CAPEX cash outflow, or that are seeking a flexible payment plan.

Amarinth has, over the years, seen high demand for its products in Africa, and working in partnership with RentCo Africa will deliver confidence to the market that projects can be financed and built, overcoming some common financial barriers and building momentum, helping to bring capital projects across the continent to fruition.

The partnership builds on Amarith's goals of delivering better localised support across the world, in-line with local content initiatives, enabling the company to deliver its products into the many challenging projects being undertaken in the region.

Itai Choto, Amarith Sales Manager for the Africa Territory, commented: "We are delighted to announce this strategic alliance and partnership with RentCo Africa. The agreement brings RentCo's financial structuring and funding expertise into the many challenging and capital-intensive projects we are working on across Africa. We are looking forward to working closely with RentCo, enabling both new and existing clients to exploit fully our centrifugal pumps and associated equipment and bring projects to successful completion."

Best Value in LNG Storage & Transport

Factory-Built Storage Tanks up to 1,200 M3

QUADAX® TOP ENTRY BUTTERFLY VALVES
MADE FOR THE EXTREME
-270°C TO +800°C (-454°F TO +1472°F)

QUADAX® Butterfly Valves outperform severe thermal cycle tests combined with an endurance test and has therefore been awarded in a large contract for replacement of Side Entry Valves in an existing LNG installation.

The QUADAX® 4-offset Offset Butterfly Valve outperformed several heavy tests and provided evidence of its quality and reliability in LNG installations.

TESTED IN THE MOST SEVERE CONDITIONS TO ZERO LEAKAGE

QUADAX has 800 Butterfly Valves
