Amarinth Delivers Vertical in-line Pumps to EDF for Sizewell B Nuclear Power Station

Oliver Brigginsshaw, Managing Director of Amarith, commented: "We are delighted that EDF has once again selected Amarith for these new pumps which replace obsolete pumps where the OEM is no longer in business. Our obsolescence program for OEM pumps is designed for any organization facing issues with existing centrifugal pumps where the OEM may have gone out of business. We can provide sacrificial and critical component spares; a strip, service, and refurbishment capability regardless of original equipment manufacturer; through to a complete pump replacement, which in many cases is fully interchangeable, hydraulically and dimensionally, with the obsolete centrifugal pump, minimizing the need to modify existing plant or pipework."
