## Amarinth delivers its first pump order to Siemens Energy

News

09 Oct 2023

Amarinth has delivered four API 610 OH5 vertical in-line pumps to be used by YPF at the Luján de Cuyo refinery in Mendoza, Argentina.

An Amarith API 610 OH5 Vertical In-Line pump for Siemens Energy undergoing hydrodynamic testing

This was Amarith's first pump order from Siemens Energy. The four API 610 12th Edition OH5 Vertical In-line pumps were required on an extremely tight deadline of 28 working weeks to meet Siemens Energy's project schedule with YPF, the main oil and natural gas producer in Argentina. The cooling water pumps will be installed in the Luján de Cuyo crude oil refinery, which is currently undergoing expansion and modernisation.

[Amarinth](#) designed and manufactured the four pumps and carried out a full suite of hydrodynamic performance and mechanical witness testing before finally air-freighting the pumps to successfully meet the deadline set by Siemens Energy.

In addition to the four pumps, Amarith also manufactured an operating spares package, including impellers, shafts, seals, wear rings and gaskets to accompany the pumps to Argentina.

Oliver Brigginsshaw, managing director of Amarith, said: "We are delighted to have successfully completed our first order from Siemens Energy for this important YPF project in Argentina, underlining once again our ability to produce pumps on short lead times for projects anywhere in the world. We look forward to building a close working relationship with Siemens Energy on future projects."
