To comply with ISO 18001, a fully completed Certificate of Decontamination must be sent to the undersigned prior to any pumps being returned to our works. Failure to comply will result in pumps not being accepted from carrier.

The standard of the submitted pumps will be judged at Amarith's discretion - if pumps are not deemed to be fully decontaminated then they will be returned at your cost.

In order to provide you with the most effective service for your pumps, it is our policy to initially strip, inspect and report all equipment. A strip report will give you maximum visibility of the work required and include our estimate for repair, this is charged at £250 per pump and a purchase order will be required for this work.

Upon acceptance of estimate a new or amended purchase order will be required for us to proceed with repair.

Repaired pumps will be returned cleaned, painted and re-assembled. If the pumps are to be used in a non-safe application, modifications may have to be carried out to ensure the pump is fit for use.

If ATEX standards are required, the following would be applicable:

- A new Amarith Rotating Assembly fitted to the original pump.  
OR
- Upgrade of original pump bearing housing by fitting a minimum of non contacting bearing protectors, brass cage bearings, wear rings (where necessary), new nameplate, Certification provided Clearances e.g. suction cover / impeller to be as original tolerances ISO5199/A

If you do not wish to proceed and require your pump to be returned it will be in a dis-assembled condition with carriage charge applicable and we will require a purchase order to cover this. Alternatively, if you wish to scrap the pump please advise and we will dispose of it at no extra cost.

Best Regards

Signed

Position

As part of the Control of Substances Hazardous to Health (COSHH) & European Health & Safety Regulations Directive 92/84/EC NO equipment will be accepted by Amarith Ltd until this certificate has been received stating such equipment is neutralized, clean & safe to handle. The standard of the submitted pumps will be judged at Amarith's discretion - if pumps are not deemed to be fully decontaminated then they will be returned or a cleaning charge will be applied.

▼ Decontamination check list	
Pump details	Customer to complete
Pump type:	
Serial number:	
Has pump been used for service with any hazardous substance?	
Product handled by pump:	
Full chemical name:	
The following decontamination procedures have been performed:	
The equipment has been decontaminated and flushed:	
The pump is free of all hazardous chemicals, biological & radioactive substances:	
The pump has been completely drained of liquid, with the drain plug removed:	
Oil filled bearing brackets must be drained prior to dispatch to Amarith:	

- Specific details and all material safety data sheets must be submitted. Please also include any relevant COSHH information and recommended PPE.

I hereby declare that the equipment is now completely neutralised, decontaminated, cleaned both inside and out and fully drained such that no special safety precautions are necessary for further handling. I assure you that the above information is correct and complete and that shipment was effected in accordance with all statutory provisions.
