

Sump pumps head east

July 1st 2007

Amarinth has appointed Abu Dhabi-based Nama Development Enterprises as one of its growing number of agents in the Middle East.

The relationship has already yielded a \$3.5m order for Amarith. The company will supply vertical sump pumps for use in pumping carcinogenic chemicals. Made from special high alloy to a bespoke design, these API pumps are being made to a deadline of 40 weeks from order.

The vessels in which the pumps will operate are coated with exotic material and so for cost reasons the pump had to be designed to fit into the smallest space possible. Additional termination points on the support plate were required to cater for other services in and out of the tank. To withstand the harsh environment, pumps had to be made from hard, exotic alloys.
