Amarinth unveils new document management system

01 June 2010

Centrifugal pump manufacturer Amarith has a new document management system in place that could deliver significant benefits to contractors and operators.

Designed entirely in-house, the new bespoke document management system enables Amarith to respond more effectively and efficiently from first point of contact at the bid phase to final delivery of the pumps in supplying, managing and tracking all the documentation required.

Customers can track all of their documents and their relevant status at any time through a secure project web enabled interface.

The system is built around Lotus Notes and is fully integrated with all Amarith corporate back-end systems and front end customer web interfaces.

Oliver Brigginsshaw, managing director of [Amarinth](#), said: "We know that documentation is one of the big issues in our industry. We have drawn on our years of experience to create a bespoke solution that really does meet, if not exceed, the needs of the industry. In particular, contractors will see significant financial benefits of utilising Amarith's web documentation system as it's totally transparent and keeps the pressure on both parties to get documentation approved quickly, ensuring all parties get paid as soon as possible."
