

Amarinth awarded €500 000 pump order by Siirtec Nigi

5 August 2016 | Roisin Reidy

The eight stainless steel API 610 OH2 pumps, which are destined for the Abu Dhabi National Company for Onshore Oil Operations' (ADCO) Al Dabb'ya Facilities Development Phase III project in Abu Dhabi, are required on a tight 27 week delivery schedule.

The pumps, two with Plan 53B seal support systems, require 3.2 material certification for all critical components including casings, impellers, shafts and seals.

Amarinth says it was selected for this project based on its previous successful deliveries of high specification pump packages to ADCO against similar tight timescales.

Oliver Brigginsshaw, managing director of Amarinth, said: "We are delighted to win this significant contract from Siirtec Nigi which recognises our depth of experience with ADCO high specification projects and which once again underlines the growth we are seeing of European engineering and procurement companies delivering into prestigious projects in the Middle East."
